

\*Tip 1: As you drag your shape into the workspace, use the orange outline to guide you in accurate placement

\*Tip 2: Once placed, check out the shape's pop-up menu, where you can change its colour, transparency and other features

# Place

Select predefined shapes and place them into the Tinkercad workspace.

Shapes will always be placed onto the workplane. Ensure your workplane is set where you want shapes to be placed, whether this be on the default ground or another face

Browse through the shapes panel and select a shape. Use the dropdown to navigate through categories

Left-click and drag your chosen shape into the workspace and release at the position you want it to be placed
