

*Tip 1: When aligning, you may want to keep one of your shapes in the same place and align the others around it. To do this, activate the align tool and then click on the shape you want to keep in position. Finally, click the relevant handle to complete the alignment

Align

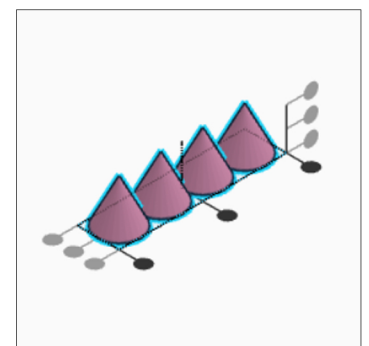

Use the align tool to line up multiple shapes in the Tinkercad workspace.

Select the shapes that require lining up and click the Align button. Alternatively, use the keyboard shortcut L

Hover over the align handles to preview how your shapes will be lined up. You can align them centrally or to the extents in all 3 axes

Click the relevant handle to complete the alignment
