

Hole

Create holes/cutouts by grouping solid shapes with hole shapes.

*Tip 1: Use the align tools to help you accurately position shapes before grouping them (see align poster)

Prepare your hole shapes (the shape you want to cut out of another shape). Any regular shape can be turned into a hole by clicking the Hole button in the shape pop-up menu

Move your hole shapes so they intersect a chosen solid shape

Group the shapes together to create the hole. Ungroup them at any point to return them to their original separated state
