

*Tip 1: In addition to remembering positions and rotations, the duplicate tool remembers scale edits. Try experimenting with this to create fascinating patterns

Duplicate

Create instant copies of objects or make creative patterns with the duplicate tool.

Select a shape (or multiple shapes) and click the Duplicate button or press Ctrl + D on your keyboard. This will create an exact copy of it directly on top of the original

If you want to create a pattern, move and edit the duplicated shape whilst it is still selected. Then click Duplicate again to create another copy with the same moves/edits applied

Continue clicking Duplicate until you have the desired number of copies
